

19mm disclaimer

abstracta[®] modular display system

design poul cadovius

Thank you for ordering a 19mm Abstracta display system. We look forward to manufacturing and shipping your unit. In order to assure your complete satisfaction, please read the following information, sign at the bottom and return with the signed quote.

The Abstracta 19mm display system is specifically designed for use as a permanent display fixture or furniture. It is engineered to accommodate a substantial amount of weight and to withstand every day wear and tear. Although it is possible to disassemble the 19mm system, we strongly recommend keeping the unit assembled. Disassembling or attempting to disassemble a 19mm unit voids the warranty.

19mm Assembly Tips

1. Apply a small amount of non-corrosive lubricant such as WD-40[®] or 3-in-1 oil on the connectors **prior** to assembly.
2. Make sure the connectors are in the correct position in the tube before hammering them together. It is recommended that they be only partially inserted until the correct position is verified.
3. Wipe off any excess lubricant with a soft cloth or paper towel.
4. Please do not disassemble unit once it is correctly together. If it is necessary to disassemble, we strongly recommend using the Abstracta Disconnect Tool (915) and Extractor Rod (EX-ABS). Similar to a slide hammer, the Abstracta Disconnect Tool creates even distribution of pressure on the connection. Using the mallet or a hammer to disassemble increases the risk of breaking connectors.
