

BannerFlex™ Tie-Down Mount

A new, durable stainless steel mount designed to secure the lower, pole-side corner or side of a banner or flag. This mount will allow the lower, outer edge of the material to wave in the breeze and spill wind from the fabric.

The mount is perfect for use with pennant-style banners where the KBW BannerFlex banner bracket is installed at the top hem and the new Tie-down Mount is installed at the lower corner. Additional Tie-Down Mounts may be installed on longer banners along the pole side if desired.

- Typical installation shows the banner grommet secured to Tie-Down Mount with 1/4" Nylon cable tie or 16 gauge or heavier galvanized wire, etc.

- Something to know: Fabrics that are allowed to "flap in the breeze" will spill more wind. However they will wear more quickly than conventional installations where full top and bottom "arm-type" brackets are used.

- Tie-Down Mount specifications:

- Stainless steel
- 2" x 2" x 1.5" H
- Tie-Down hole: .5"
- Banding size: .75" wide max
- Weight: 2.1 oz.
