# doripole®

Outdoor Pennant System

▶ Dori Pole is the unique combination of a long, flowing nylon pennant atop a tall, flexible fiberglass pole signaling fun, flair and festive times wherever it flies!

## Ask how you can sell Dori Pole in your store!

- Instantly inviting
- Floating colors in motion
- (3) piece pole extends from 76" to 19'
- Flexible fiberglass pole
- Swiveling yoke ensures tangle-free action
- Durable, bright nylon pennants
- Standard pennant size – 14'x24" & 8'x18"
- Easy to install and take down
- Transports easily with telescoping pole
- Mix and match colors to suit your style and event

Dori Pole also functions as a bird deterrent, see: [www.doripole.com/bird-deterrent](http://www.doripole.com/bird-deterrent)

## Dori Pole height options -

Available in three size options, the Dori Pole pennant system offers a (3)-piece 19', a (2)-piece 13.5' and a (2)-piece (JR) 12'. The (3)-piece is the most popular – offering both allure and the final height benefit proven effective as a bird deterrent with 14' pennant.

### (3)-Piece “Telescoping” 19' Dori Pole:

A fiberglass pole that extends from 76" to 19' with a rotating yoke and 14' long pennant. Ships via **standard ground**.  
**Standard pennant size: 14' x 24"**

This Dori Pole is ideal for where portability and storage are a priority. It's 14' long, colorful pennant will attract attention at festivals, racetracks, sporting events and even at homes, lake cottages and tailgating – anywhere people are having fun!

### (2)-Piece Mid-Rise 13.5' Dori Pole:

This is the in between brother to the tall 19' pole and the shorter 12' JR pole. It's designed for use with our 8' x 18" pennants, but uses the same Standard Ground Stake, Standard Ground Sleeve and vehicle Wheel Stand as the 19' and 22' poles. Ships via **standard ground**.

### Mid-Rise pennant size: 8' x 18"

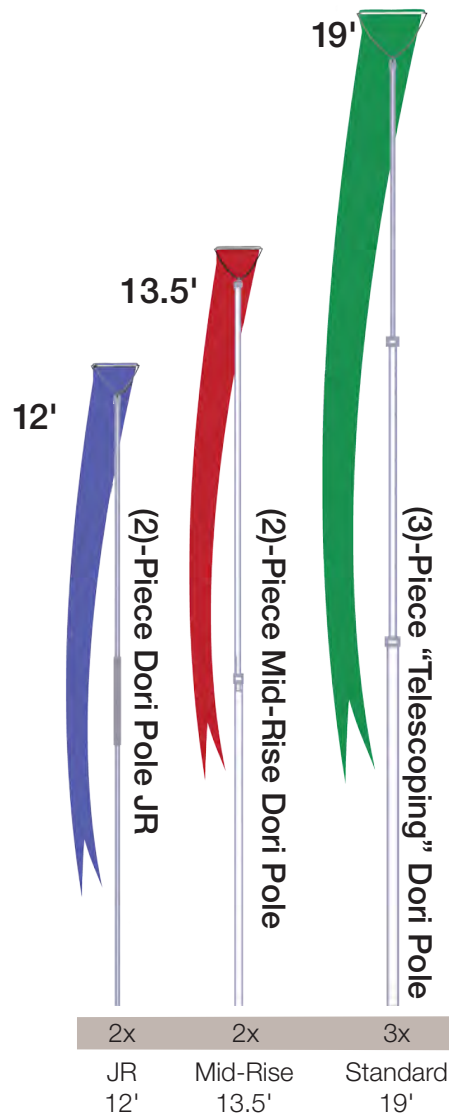

This new pole telescopes from 7' to 12.5' - becoming 13.5' when the pennant and arms are installed. It's a sturdier option than the JR as it resists swaying in the wind. It's a “perfect choice” tailgating using the Wheel Stand.

### (2)-Piece 12' Dori Pole JR:

The fiberglass pole is 12' tall and 1/2" round. It assembles easily from 6' to 12' with a rotating yoke and 8' long pennant. Ships via **standard ground**. **JR pennant size: 8' x 18"**

Designed as a smaller version Dori Pole, Dori Pole JR works well as an eye catcher at open houses, big sales or special events – anywhere you want people to take notice and join the fun!

(For 13.5' & 19' Poles)

**DP-DPB \$14.95**  
(Fits most 2" aluminum dock posts)

## Exterior Lightpole Banner Bracket Sets

▶ KBW BannerFlex is the most trusted name in banner hardware.

Developed in 1984, KBW BannerFlex is the first bracket to use flexible fiberglass arms rather than steel pipes. The patented KBW BannerFlex bracket extends the life of your banners through its unique “canted” design – deflecting enough wind load to measurably reduce the stress on light poles.

BannerFlex® - the only street banner bracket line designed to take advantage of advancements in superlative modern materials and casting design.

Strength, flexibility, durability and proven performance.

## Exterior Lightpole Banner Bracket Sets - Product Descriptions

KBW BannerFlex Brackets are available in the three basic models shown below, with arm options and accessories for each version. The following pages describe the features and benefits of the three models.

**KBW BannerFlexD3...for standard large-format light pole banners.**

The original, patented KBW BannerFlexD3 has endured the test of time as the "standard of the industry". The BannerFlexD3 bracket arms can be adjusted without moving the main casting or can be removed altogether and replaced with Flag or Flower Pot holders. Optional arms include the RoundPro arm in various sizes or the premium Airow arm (for 24", 30" and 36" wide banners).

The KBW BannerFlexD3 works well for 30"x 60" to 36"x 96" banners.

**KBW BannerFlex Metro...for small to mid-size banners on ornamental or fluted light poles.**

Designed specifically for fluted, ornamental or smaller light poles, the Metro is the sleek and streamlined solution for mid-size banners, especially in metropolitan settings where aesthetics are important without the sacrifice of strength and performance. The Metro is a two-part system, similar to its big brother the D3, and is available with a RoundPro arm or the premium Airow arm.

The KBW BannerFlex Metro works well for 18"x 36" to 30"x 72" banners.

**KBW BannerFlex JR...for smaller banner displays.**

This one-piece banner bracket is designed for smaller banners and is generally used on smaller diameter light poles. Although the JR does not have adjustability built in, screw gear banding allows for easy installation and adjustment, time after time. The premium Airow arm is not available for the JR, but features the new RoundPro arm.

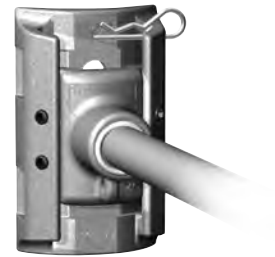

The KBW BannerFlex JR works well for 18" x 36" wide to 30" x 60" tall banners.

## Banner Arm Options – For BannerFlex D3 and Metro Brackets

### ▶ KBW BannerFlex Bracket Arm Options

The BannerFlex product line has many options for the three different basic BannerFlex models. This page describes the optional “Arms”.

**History:** Introduced in 1983, KBW Consort was the very first company to innovate using resilient and flexible “pultruded” fiberglass for banner brackets, hence the name “BannerFlex”. In 2003 we created the proprietary “Airow” arm, that is eccentrically shaped pultruded fiberglass, to spill significant wind without the use of “mechanical” materials, such as springs.

#### RoundPro™ Fiberglass Arms - Only...from Consort Display Group!

Our new proprietary round fiberglass arms are a different composition than others on the market. **This new arm has higher flexural and compressive strength and provides from 12% to 23% more bending**, to decrease wind force on the utility pole, depending on banner size and wind velocity. The new arm is available in various sizes for each of the three BannerFlex models. This type of arm is a full round arm, .75" (19mm) diameter and is now standard on all BannerFlex brackets except the premium Airow® model. On the following pages you will see these arms specified in various lengths from 19" to 37" for banner widths from 18" to 36". Longer arms are available upon special order. The new RoundPro™ arm is offered in both standard off-white and black.

#### The Premium Airow® Arms – ours exclusively!

This innovative arm is manufactured only by KBW/Consort for our BannerFlex line. **No other brand of banner bracket hardware offers this unique and proven wind-force-reducing option.** We invite you to visit the bannerflex.com website under “Resources” and select “Wind Force Calculator” and also “Videos” to learn more about this unique product. With the Wind Force Calculator, you can compare the wind reduction of our RoundPro™ arms to the Airow® arm. The Airow arm is powder coated in medium gray color.

# KBW BannerFlex<sup>®</sup> D3

## For Standard Large-Format Light Pole Banners

The KBW BannerFlex D3 is “THE” bracket of choice for standard utility and light-pole installation.

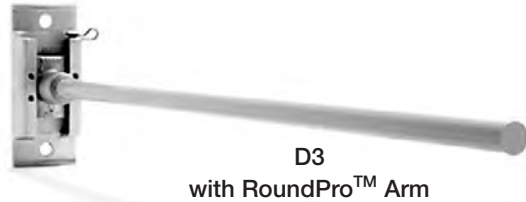

The KBW BannerFlex D3 bracket arms can be adjusted without moving the main casting – or can be removed altogether and replaced with Flag or Flower Pot Holders. Installs on lightpole with banding or bolts.

Warranty: 12 years/100% satisfaction guarantee (longest in the industry).

- Patented
- Made in the USA
- Corrosion resistant aluminum
- RoundPro™ (or) premium Airow arms
- Performance “cantilever” construction (canted 4°)
- Natural aluminum or black powder coated casting
- Accessories - Flag or Flower Pot Holder (adaptable)

# KBW BannerFlex<sup>®</sup> metro

## For Mid-Size Banners - on Ornamental or Fluted Light Poles

The KBW BannerFlex Metro bracket was designed as a smaller, adjustable model for use with mid-sized banners on fluted and ornamental poles.

This bracket is streamlined specifically to address and solve the aesthetic and engineering challenges often present in metropolitan areas. Installs on lightpole with banding or bolts.

Warranty: 12 years/100% satisfaction guarantee (longest in the industry).

- Made in the USA
- Smaller adjustable arm castings
- RoundPro™ (or) premium Airow arms
- Canted 2° for maximum performance
- Natural aluminum or black powder coated castings
- Sleek attractive appearance
- Installer's choice

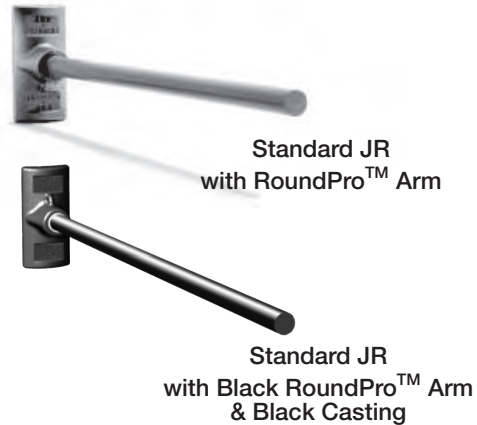

## For Smaller Banner Displays - on Decorative Poles

- ▶ KBW BannerFlex JR is a one-piece bracket ideal for 30"x 60" or smaller banners used for smaller diameter poles. Features new, RoundPro™ fiberglass arms.

Simple, screw gear bands allow for easy installation and adjustment time after time..

Warranty: 12 years/100% satisfaction guarantee (longest in the industry).

- Made in the USA
- Ideal for smaller banners
- Strong corrosion-resistant aluminum
- Natural aluminum or black powder coating
- Sleek attractive appearance
- Airow arm is not available on JR
- Straight arm, not canted

# KBW BannerFlex®

- ▶ Banner Bracket Utility Pole Fasteners

All BannerFlex Banner Brackets can be installed on utility poles with either stainless steel banding or with bolts.  
Note: Bolts to be sourced locally by customer.

For more detailed advice on choosing and applying banding options please refer to our Banner Hardware Guidebook found online at:

[www.bannerflex.com/resource/download-documentation](http://www.bannerflex.com/resource/download-documentation).  
(See pages 8, 9 and 15 of the Guidebook). When Screw Gear (Worm Gear) Banding is appropriate, we suggest our custom 5/8" x 40" long banding custom made for us. These are more than twice as strong as 9/16" wide "quick release" bands.

**IMPORTANT!** For Tool-Applied Banding we suggest that it be "double-wrapped" around the pole, and twice through the buckle before tightening with the tool, for a "fail-safe" application. See the 3/4" banding installation video at [www.bannerflex.com/resources/videos](http://www.bannerflex.com/resources/videos).

**Square Pole Adapters (D)**

When mounting Banner Brackets onto square-faced utility poles that are wider than 5", Square Pole Adaptors, also known as Adapter Shims, are used on the back of the D3 and Metro Main Castings, and also to fit odd-shaped fluted poles or allow more banding tension on flat-faced square poles. They are manufactured to fit our hardware cross-sections and are available individually or ordered already attached to our BannerFlex hardware.

**Tie-Down Mount Bracket (A)**

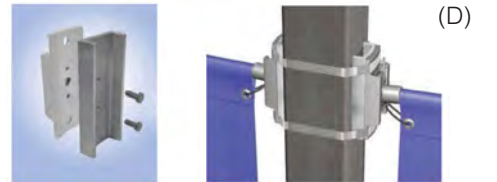

This little stainless steel bracket allows the lower portion of a banner to flutter in the breeze and is recommended for situations where there is no bottom bracket arm and/or where wind loads need to be decreased. Wind loads can be halved by attaching the lower pole-side corner with a cable tie or bungee to an anchored "tie down" and letting the outside bottom edge fly freely. See page 15 of the Banner Hardware Guidebook.

**Flower Pot Holders/Flag Holders**

Flower Pot Holders are special arms that slide into the BannerFlex D3 main casting (not available for Metro or JR). These accessories allow options when banners are not being displayed. Flower Pot Holder = 19" long with upward cant to bear more weight: up to 40 lbs.  
Flag Holder = holds a 1" diameter pole/6' in length.

# BannerFlex® Messenger® GMS

## Permanent Outdoor Banner Stands

▶ The BannerFlex Messenger GMS Banner Stand is used for applications requiring permanent banner installation.

It allows easy, tamper-proof banner changes and is engineered for durability and dependability. The Messenger GMS stand is a ground-mounted system, engineered to be bolted to concrete, wood or other suitable material.

Custom sizes are available (subject to minimum order/banner sold separately). Contact your Consort representative for more information.

The standard Messenger GMS BannerStand will accommodate 72" or 48" tall banners (fittings are included for both) and banner widths from 16" to 24" in 2" increments (specify your choice). The spring-loaded top bar and our exclusive "Perfect Fit" fastener locations ensure a tight and trim banner appearance.

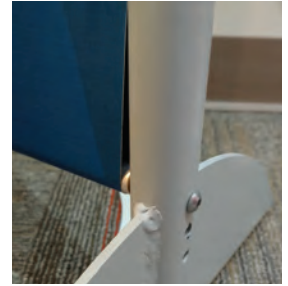

Finish: Aluminum stand is available in powder-coated Medium Grey and Black.

Weight: GMS Stand 15 lbs.  
Shipping Weight: 21 lbs.

Packing: Complete unit is shipped in one box and can ship standard ground. Bulk shipping on pallets is available. Size of box 80"x18"x 7."

Banners may be printed on (2) sides. (2") hems are recommended at top and bottom of banners. No intermediate support necessary.

Ideal uses include Bank and Credit Union drive-throughs.

- Made in the USA
- 100% aluminum construction
- Spring-loaded banner tension
- Easily changed graphics
- Tamper-proof fasteners
- Exterior powder coat finish
- Stainless steel hex head fasteners
- Vertical adjustment for banner height (+/- 1/2")
- Aluminum base has 7/16" holes for bolting to concrete or other surface (stainless steel anchor bolts, washers and lead anchors included)
- Custom widths available
- Full-size mounting instructions & template included

**Digital Printing**

Beginning 2020, Consort has digital printers with amazing capabilities:

1. Superb digital printing on vinyl media for exterior and interior banners.
2. State-of-the-art digital printing on all colors of Sunbrella® marine acrylic.
3. Flatbed digital printing on virtually all solid substrates, including glass & metals

The most remarkable news about our new equipment is that we are no longer “screen” printing our Sunbrella marine acrylic banners!

Our entire large-format screen printing facility has been replaced by new technology that prints intense, vibrant inks onto Sunbrella®. Prior to this new technology, all our marine acrylic banners were hand screen printed with plastisol inks, cured with big, hot dryers. No more! No more big, expensive screens that are required for every color and no more ink mixing!

**Will the marine acrylic banner images look differently than our past screen printed images?**

The richness of our past screen printing (printed one color at a time) is not only matched by the new process but is expanded with true four-color process gradients, not previous attainable. *We think you’ll love the results!*

**Does that mean there are no more “Screen Preparation Charges” for Sunbrella printed banners?**

Correct! No more screens. A multi-color Sunbrella banner is now the same price as a one-color Sunbrella banner. Instead, there is a small file charge (\$25.00 or less) per design change and that can be waived for orders of 10 banners or more per design.

**Which is better, vinyl digital media banners or marine acrylic (Sunbrella) banners?**

See the next page under “How do we print our banners?” for more information on that. Both methods are excellent, but cost, durability and image requirements may help you determine your preferred material. For one example, vinyl will allow a more photographic look and marine acrylic may be viewed as “richer looking”.

**2024 Fall/Holiday/Winter RTP Banner Catalog**

**The KBW Ready-To-Print Street Banner Program**  
(Kalamazoo Banner Works Street Banner Program)

▶ **This is why we're so well known in the banner world!**  
The following pages are just some of the hundreds of designs that have made us famous in the avenue or street banner industry. We were, in fact, the first company, back in the early 1980's to market the street banner and hardware concept nationally and internationally. And, we were the very first to offer a line of stock and ready-to-print designs. Yes, these are literally ready to print, including ready to customize for all seasons and holidays. Some of our designs are shown on the next few pages. For a more complete view of the selections, go to [www.kalamazoobannerworks.com](http://www.kalamazoobannerworks.com) click on "Products" and shop.

**How do we print our banners?**

As of January 2020, all our street banners are digitally printed on either marine acrylic fabric (Sunbrella®) or white vinyl digital media. Prior to this we had a large screen print operation, as well as standard digital on vinyl printing, but advancements in digital printing now allows us to print vibrant colors onto any color of marine textiles. Yes, this is a new process and is the result of extensive research and development done exclusively by KBW/Consort, in cooperation with Glen Raven Mills, the manufacturer of Sunbrella brand fabrics. How to decide between marine acrylic or vinyl banners? If cost is your biggest concern, vinyl is the way to go. If a "richer look" is a priority, we suggest marine acrylic, although we do not recommend printing on white or light-colored marine acrylic for street banners. This is because sunlight will create shadows of printed images from one side to the other.

The darker marine acrylic fabrics will avoid that issue. If you require a white or light background, choose our vinyl media, which has a "block-out" liner to prevent shadowing. Which is more durable and long-lasting in the weather? Advancements in ink technology make both marine acrylic and vinyl good choices, although we prefer marine acrylic as the best value for the longer term.

**"What are 'Imprint Areas?'"**

Most RTP (Ready-To-Print) designs show a recommended space where the design can be personalized with a city, area or festival kind of name, although most designs can stand on their own without imprints.

**Standard KBW street banner sizes:**

Our RTP designs are based on three sizes: 30" x 94", 30" x 60" and 18" x 36". Other sizes are available and depending on the custom size there may or may not be an extra charge. You may ask why 94" (7'-10") versus 96" (8'-0")? Answer: Way back in the beginning we decided that some folks may want to display their banner in a room with the standard height of 8'-0". The 94" size is perfect for that!

**Custom banner designs:**

About 60% of our printing is totally custom and we are happy to design banners for you or work with your graphic artist in any way. Contact your sales representative.

**Mounting hardware for street banners:**

Our KBW BannerFlex hardware IS the standard of the industry. Innovative, efficient, strong, reliable, built to be in the wind! **See the BannerFlex section or visit: [www.bannerflex.com](http://www.bannerflex.com).**

KALAMAZOO BANNER WORKS

The RTP (Ready-to-Print) Collection

The RTP Stock Banners on the following pages are available to be digitally printed at your request. Some have room for custom imprints. Most of the designs can be printed on either Sunbrella marine acrylic or 22 oz. vinyl media, per your choice. Banner designs that have the notation "Vinyl Only" can only be printed on vinyl media (due to background color). The stock sizes, as noted on the previous page, are 18"x36", 30"x60" and 30"x94". Banners over 36" long have "double-rolled" top and bottom hems for strength.

Unless otherwise requested, all have grommets on the pole side, top and bottom. Some banners may be able to have different Sunbrella fabric colors (see previous pages for colors) substituted, at extra cost. Check for availability. All banners are printed on two sides.

Go to [consort.com/kbw/stockdesigns](http://consort.com/kbw/stockdesigns) to see the most current RTP designs!

Custom home office design

Acrylic shelves with corner notches

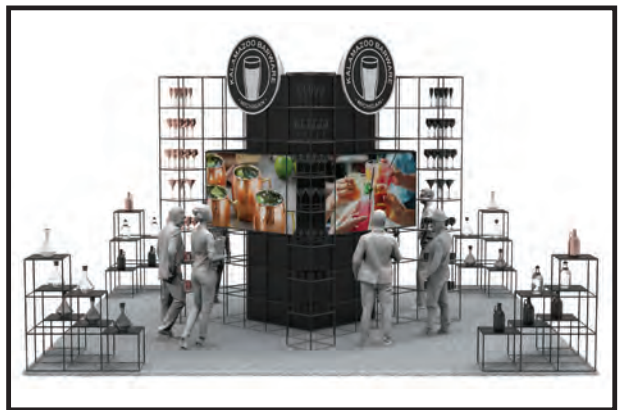

Graphic panels with corner clips

Square, fitted metal shelves

Bamboo shelves with round corners

Tradeshow set up using CubitzKitz

CubitzKitz is a specialized aluminum tube and polymer connector system within the original Abstracta® Modular Display System. It's designed for easy assembly and disassembly, allowing for re-arranging of structures for more temporary use. It's perfect for short duration displays like lobby displays, museum exhibitions, tradeshow, offices and home offices. Special accessories include: shelving, panels of various materials and graphics, and panel clips. A special Cubitz Disconnect Tool and mallet are also included in the accessories.

The Cubitzkitz parts are 75% lighter weight than the standard Abstracta system and yet extremely strong. The classic, round tubing and connectors provide an elegant, simple presentation. The look of original Abstracta never goes out of style and now Cubitzkitz make that look easier and more versatile. The standard Cubitzkitz tubing is 15" long satin black anodized aluminum. If legs for units are desired, 3" long aluminum tubes and adjustable feet are part of the system.

Cubitz Disconnect Tool

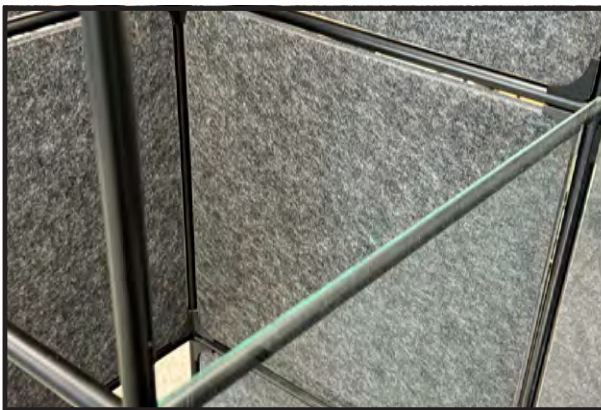

Storage boxes with slat tops

Re-sizeable open storage cubes

Polycarbonate slats top shelf

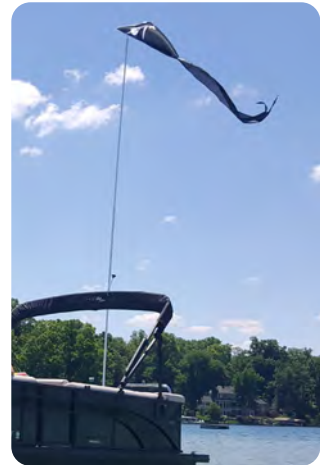

Rigid .35" felt sound panels

Marble shelves with round corners

The shelving and boxes shown here are designed so that shelf clips are not needed. For example, the clear acrylic and wood have round notches at the corners and the size goes to half the tube width, allowing shelving to abut each other. The marble and bamboo are shown with rounded corners and sit on half the tub width. Tempered glass is also available in this shape. The black metal panel also fits onto the cubes without shelf clips. The black slats shown are each 3.625" wide and snap onto the 15" cubes.

The system is easily changeable. Cubitzkitz is an ideal solution for impactful, eye-catching special lobby displays and tradeshow exhibitions. Whether it's a small display or tall and wide, the configurations can be put up in short time. Graphics and shelving can be moved around as the whim arises. Graphic illustrations are available to make set-up easy to assemble. Due to the lighter weight of the system, shipping costs are minimal.
